

ARE YOU AFFECTED BY SEVERE ASTHMA?

Of all people with asthma
4-8% have severe asthma

Severe asthma is
more than 'just asthma'

People with **severe asthma** have breathing difficulty even when taking high dose asthma medicines and doing everything they can to stay healthy

Hard to treat but it is possible with the right medications

Heavy toll socially, work and family life

Risk of asthma attacks and frequent hospitalisations

Impacts quality of life

Trouble breathing every day despite treatment

TARGETED TREATMENT for severe asthma is usually successful

Confirmed asthma diagnosis - needs specialist care

Series of tests

Targeted treatment tailored to suit specific asthma phenotypes

Specific medical treatments
